SQL in 30 days. One hour a day.

SQL IN 30 DAYS

Week 1: read any table

Do this → Done when

1. **Install SQLite or use any free online SQL editor**
   You can run SELECT 1 and see a result
2. **SELECT and FROM on one small table**
   You can show only the columns you need
3. **WHERE with =, >, < and AND / OR**
   You can pull Pune orders above 500
4. **IN, BETWEEN and LIKE**
   You can find every email ending in mail.com
5. **ORDER BY and LIMIT**
   You can show the 5 biggest orders
6. **NULL: IS NULL and COALESCE**
   You know why = NULL never matches
7. **Revise: write 10 filters from memory**
   All 10 run without looking anything up

SQL IN 30 DAYS

Week 2: summarise like a report

Do this → Done when

8 **COUNT, SUM, AVG, MIN, MAX**
You can total sales for the whole table

9 **GROUP BY one column**
You can show sales by region

10 **GROUP BY two columns**
You can show sales by region and month

11 **HAVING vs WHERE**
You can keep only regions above a target

12 **COUNT(DISTINCT ...)**
You can count unique customers

13 **CASE WHEN for labels and bands**
You can tag orders High, Mid, Low

14 **Rebuild one Excel pivot in SQL**
Your query matches the pivot total

SQL IN 30 DAYS

Week 3: join tables

Do this → Done when

15 **Why data sits in many tables**
You can explain a key in one line

16 **INNER JOIN on orders and customers**
You can show each order with the customer name

17 **LEFT JOIN and the NULLs it creates**
You can find customers with no orders

18 **Join three tables**
You can add product names to the same result

19 **Self join**
You can show each employee with their manager

20 **Joins plus GROUP BY**
You can show sales by customer city

21 **Count rows before and after a join**
You can spot a join that duplicated rows

SQL IN 30 DAYS

Week 4: interview level

Do this → Done when

22 Subqueries in WHERE
You can find orders above the average order

23 CTEs with WITH
You can rewrite yesterday's subquery so it reads top to bottom

24 ROW_NUMBER, RANK, DENSE_RANK
You can explain the difference on tied values

25 Top N per group
You can show the top 2 orders in every region

26 Running total with SUM() OVER
You can show month by month cumulative sales

27 Dates: month, year, days between
You can group orders by month

28 Second highest salary, 3 ways
You can answer it with LIMIT, a subquery and DENSE_RANK

SQL IN 30 DAYS

Days 29 and 30: one project

Do this → Done when

29 **Pick one public sales dataset and load it**
It sits in one table you can query

30 **Write 10 business questions first, SQL second**
Each question has a query and a one-line answer

31 **Put the queries and answers on GitHub**
A recruiter can read it in 2 minutes

32 **If you miss a day, do not restart**
Continue from the day you stopped

☆ THE 90-DAY SYSTEM · 5.0 BEST SELLER

Become a data analyst in 90 days.

Open it every morning. It tells you what to learn, build and ship that day. 1 hour a day, no coding background needed.

27 portfolio projects with real data

100+ interview Q&As with model answers

365 days of 1:1 mentor access

10+ job applications sent by Day 90

0 to job-ready, one day at a time

Built by Abhishek · 7 yrs in data · 31,000+ helped
