POWER BI

10 MEASURES FOR EVERY REPORT

By @thedataguy16

Sample data: Sales: 8 orders, Jan 2024 to Mar 2025. Customers: Retail or B2B. Read in a card, no filters, unless shown.

1 *Total Sales*

```
Total Sales = SUM(Sales[Amount])
```
→ 5,750

2 *Number of orders*

```
Orders = COUNTROWS(Sales)
```
→ 8

3 *Unique customers*

```
Customers = DISTINCTCOUNT(Sales[CustomerID])
```
→ 5

4 *Average order*

```
Avg Order = AVERAGE(Sales[Amount])
```
→ 718.75

5 *Units sold*

```
Units = SUM(Sales[Qty])
```
→ 44

6 *Row-by-row revenue*

```
Revenue = SUMX(Sales, Sales[Qty] * Sales[Price])
```
→ 5,750

7 *Biggest order*

```
Biggest Order = MAX(Sales[Amount])
```
→ 1,800

8 *Average price per unit*

```
Avg Price = DIVIDE([Total Sales], [Units])
```
→ 130.68

9 *Sales per customer*

```
Per Customer = DIVIDE([Total Sales], [Customers])
```
→ 1,150

10 *Divide by zero, safely*

```
Safe = DIVIDE([Total Sales], 0, 0)
```
→ 0

Interview trap: SUM adds a column. SUMX does the maths row by row first.

POWER BI

CALCULATE AND FILTERS

By @thedataguy16

Sample data: Sales: 8 orders, Jan 2024 to Mar 2025. Customers: Retail or B2B. Read in a card, no filters, unless shown.

11 *Only North*

```
North Sales = CALCULATE([Total Sales], Sales[Region] = "North")
```

→ 2,350

12 *Only pens*

```
Pens Sold = CALCULATE([Units], Sales[Product] = "Pen")
```

→ 35

13 *Orders above 500*

```
Big Orders = CALCULATE([Orders], Sales[Amount] > 500)
```

→ 4

14 *Ignore the region filter*

```
All Regions = CALCULATE([Total Sales], REMOVEFILTERS(Sales[Region]))
```

→ 5,750 on every row

15 *Share of total*

```
% of Total = DIVIDE([Total Sales], CALCULATE([Total Sales], ALL(Sales)))
```

→ North 40.9%

16 *Sales from B2B customers*

```
B2B Sales = CALCULATE([Total Sales], Customers[Segment] = "B2B")
```

→ 4,050

17 *Orders from Retail*

```
Retail Orders = CALCULATE([Orders], Customers[Segment] = "Retail")
```

→ 5

18 *Same count, with FILTER*

```
Big Orders 2 = COUNTROWS(FILTER(Sales, Sales[Amount] > 500))
```

→ 4

19 *Two conditions*

```
South Mouse = CALCULATE([Total Sales], Sales[Region] = "South", Sales[Product] = "Mouse")
```

→ 1,350

Remember: a filter inside CALCULATE replaces the visual's filter on that column.

POWER BI

TIME AND RANKING

By @thedataguy16

Sample data: Sales: 8 orders, Jan 2024 to Mar 2025. Customers: Retail or B2B. Read in a card, no filters, unless shown. Plus a Date table.

20 *Year to date*

```
Sales YTD = TOTALYTD([Total Sales], 'Date'[Date])
```

→ Mar 2025: 3,850

Same period last year

21

```
Last Year = CALCULATE([Total Sales], SAMEPERIODLASTYEAR('Date'[Date]))
```

→ 2025: 1,900

22 *Year-on-year growth*

```
YoY % = DIVIDE([Total Sales] - [Last Year], [Last Year])
```

→ 2025: +102.6%

Last month

23

```
Last Month = CALCULATE([Total Sales], DATEADD('Date'[Date], -1, MONTH))
```

→ Mar 2025: 3,150

Rank regions

24

```
Region Rank = RANKX(ALL(Sales[Region]), [Total Sales])
```

→ North 1, West 2, South 3

Rank with a tie

25

```
Product Rank = RANKX(ALL(Sales[Product]), [Total Sales])
```

→ Mouse 1, Keyboard 1, Pen 3

Average across regions

26

```
Avg Region = AVERAGEX(ALL(Sales[Region]), [Total Sales])
```

→ 1,916.67

Bring in a column (calc column)

27

```
Segment = RELATED(Customers[Segment])
```

→ Row 1: Retail

Interview trap: time functions need a separate Date table, marked as one.

Your manager asks...

by @thedataguy16

#	Question	Use this measure
1	What did we sell in total?	`Total Sales (1)`
2	How many people bought?	`Customers (3)`
3	What is a normal order worth?	`Avg Order (4)`
4	How is North doing?	`North Sales (11)`
5	What share is each region?	`% of Total (15)`
6	Is B2B worth the effort?	`B2B Sales (16)`
7	Are we ahead of last year?	`YoY % (22)`
8	How is this year going so far?	`Sales YTD (20)`
9	Did this month beat last month?	`Last Month (23)`
10	Which region is best?	`Region Rank (24)`
11	Which product leads?	`Product Rank (25)`
12	How many big orders?	`Big Orders (13)`
13	What does one unit sell for?	`Avg Price (8)`
14	What is our biggest single order?	`Biggest Order (7)`
15	How many Retail orders?	`Retail Orders (17)`
16	Show the total even when I filter	`All Regions (14)`

☆ THE 90-DAY SYSTEM · 5.0 BEST SELLER

Become a data analyst in 90 days.

Open it every morning. It tells you what to learn, build and ship that day. 1 hour a day, no coding background needed.

27 portfolio projects with real data

100+ interview Q&As with model answers

365 days of 1:1 mentor access

10+ job applications sent by Day 90

0 to job-ready, one day at a time

Built by Abhishek · 7 yrs in data · 31,000+ helped
