27 DAX measures every Power BI job uses

POWER BI · 1/2

The basics of every report

Totals, counts, averages

Data: Sales: 8 orders, Jan 2024 to Mar 2025. Customers: Retail or B2B. Read in a card, no filters, unless shown.

1 Total Sales

→ 5,750

```
Total Sales = SUM(Sales[Amount])
```

2 Number of orders

→ 8

```
Orders = COUNTROWS(Sales)
```

3 Unique customers

→ 5

```
Customers = DISTINCTCOUNT(Sales[CustomerID])
```

4 Average order

→ 718.75

```
Avg Order = AVERAGE(Sales[Amount])
```

5 Units sold

→ 44

```
Units = SUM(Sales[Qty])
```

POWER BI · 2/2

The basics of every report

Totals, counts, averages

6 Row-by-row revenue

→ 5,750

```
Revenue = SUMX(Sales, Sales[Qty] * Sales[Price])
```

7 Biggest order

→ 1,800

```
Biggest Order = MAX(Sales[Amount])
```

8 Average price per unit

→ 130.68

```
Avg Price = DIVIDE([Total Sales], [Units])
```

9 Sales per customer

→ 1,150

```
Per Customer = DIVIDE([Total Sales], [Customers])
```

10 Divide by zero, safely

→ 0

```
Safe = DIVIDE([Total Sales], 0, 0)
```

Interview trap: SUM adds a column. SUMX does the maths row by row first.

POWER BI · 1/2

CALCULATE and filters

The one function interviews test

Data: Sales: 8 orders, Jan 2024 to Mar 2025. Customers: Retail or B2B. Read in a card, no filters, unless shown.

11 Only North

→ 2,350

```
North Sales = CALCULATE([Total Sales], Sales[Region] = "North")
```

12 Only pens

→ 35

```
Pens Sold = CALCULATE([Units], Sales[Product] = "Pen")
```

13 Orders above 500

→ 4

```
Big Orders = CALCULATE([Orders], Sales[Amount] > 500)
```

14 Ignore the region filter

→ 5,750 on every row

```
All Regions = CALCULATE([Total Sales], REMOVEFILTERS(Sales[Region]))
```

15 Share of total

→ North 40.9%

```
% of Total = DIVIDE([Total Sales], CALCULATE([Total Sales], ALL(Sales)))
```

POWER BI · 2/2

CALCULATE and filters

The one function interviews test

16 Sales from B2B customers

→ 4,050

```
B2B Sales = CALCULATE([Total Sales],
Customers[Segment] = "B2B")
```

17 Orders from Retail

→ 5

```
Retail Orders = CALCULATE([Orders],
Customers[Segment] = "Retail")
```

18 Same count, with FILTER

→ 4

```
Big Orders 2 = COUNTROWS(FILTER(Sales,
Sales[Amount] > 500))
```

19 Two conditions

→ 1,350

```
South Mouse = CALCULATE([Total Sales],
Sales[Region] = "South", Sales[Product] =
"Mouse")
```

Remember: a filter inside CALCULATE replaces the visual's filter on that column.

POWER BI · 1/2

Time and ranking

YTD, last month, top 5

Data: Sales: 8 orders, Jan 2024 to Mar 2025. Customers: Retail or B2B. Read in a card, no filters, unless shown. Plus a Date table.

20 Year to date

→ Mar 2025: 3,850

```
Sales YTD = TOTALYTD([Total Sales],
'Date'[Date])
```

21 Same period last year

→ 2025: 1,900

```
Last Year = CALCULATE([Total Sales],
SAMEPERIODLASTYEAR('Date'[Date]))
```

22 Year-on-year growth

→ 2025: +102.6%

```
YoY % = DIVIDE([Total Sales] - [Last Year],
[Last Year])
```

23 Last month

→ Mar 2025: 3,150

```
Last Month = CALCULATE([Total Sales],
DATEADD('Date'[Date], -1, MONTH))
```

POWER BI · 2/2

Time and ranking

YTD, last month, top 5

24 Rank regions

→ North 1, West 2, South 3

```
Region Rank = RANKX(ALL(Sales[Region]),
[Total Sales])
```

25 Rank with a tie

→ Mouse 1, Keyboard 1, Pen 3

```
Product Rank = RANKX(ALL(Sales[Product]),
[Total Sales])
```

26 Average across regions

→ 1,916.67

```
Avg Region = AVERAGEX(ALL(Sales[Region]),
[Total Sales])
```

27 Bring in a column (calc column)

→ Row 1: Retail

```
Segment = RELATED(Customers[Segment])
```

Interview trap: time functions need a separate Date table, marked as one.

POWER BI · 1/2

Your manager asks...

Question → Use this measure

1. **What did we sell in total?**
   Total Sales (1)
2. **How many people bought?**
   Customers (3)
3. **What is a normal order worth?**
   Avg Order (4)
4. **How is North doing?**
   North Sales (11)
5. **What share is each region?**
   % of Total (15)
6. **Is B2B worth the effort?**
   B2B Sales (16)
7. **Are we ahead of last year?**
   YoY % (22)
8. **How is this year going so far?**
   Sales YTD (20)

POWER BI · 2/2

Your manager asks...

Question → Use this measure

9 **Did this month beat last month?**
Last Month (23)

10 **Which region is best?**
Region Rank (24)

11 **Which product leads?**
Product Rank (25)

12 **How many big orders?**
Big Orders (13)

13 **What does one unit sell for?**
Avg Price (8)

14 **What is our biggest single order?**
Biggest Order (7)

15 **How many Retail orders?**
Retail Orders (17)

16 **Show the total even when I filter**
All Regions (14)

☆ THE 90-DAY SYSTEM · 5.0 BEST SELLER

Become a data analyst in 90 days.

Open it every morning. It tells you what to learn, build and ship that day. 1 hour a day, no coding background needed.

DAY 1-21 — Excel + Stats

DAY 22-45 — SQL

DAY 46-65 — Power BI

DAY 66-90 — Python + Jobs

27 portfolio projects with real data

100+ interview Q&As with model answers

365 days of 1:1 mentor access

10+ job applications sent by Day 90

0 to job-ready, one day at a time

Built by Abhishek · 7 yrs in data · 31,000+ helped
