Excel round tomorrow?

Practise these 22 tasks.

EXCEL ROUND

Lookups they always ask

Find one value in a table

Data: Example sheet, A2:F8 = Order, Rep, Region, City, Sales, Date. 7 orders (Apr to Jun 2024), order 104 entered twice, B2 is a messy name.

1 Region of order 103

→ North

```
=VLOOKUP(103,A2:F8,3,FALSE)
```

2 Look left: Neha's order number

→ 104

```
=INDEX(A2:A8,MATCH("Neha Gupta",B2:B8,0))
```

3 Missing order, no #N/A

→ Not found

```
=IFERROR(VLOOKUP(999,A2:F8,3,FALSE),"Not found")
```

4 Sales of order 105

→ 950

```
=INDEX(A2:F8,MATCH(105,A2:A8,0),5)
```

Interview trap: VLOOKUP only looks right. INDEX + MATCH looks any way.

EXCEL ROUND

Conditional maths

SUMIF, COUNTIF and friends

1 Total sales, North → 4,200

```
=SUMIF(C2:C8,"North",E2:E8)
```

2 Orders above 1,000 → 3

```
=COUNTIF(E2:E8,">1000")
```

3 North sales from Kanpur only → 3,000

```
=SUMIFS(E2:E8,C2:C8,"North",D2:D8,"Kanpur")
```

4 Average South order → 875

```
=AVERAGEIF(C2:C8,"South",E2:E8)
```

5 Order 101 as % of total → 16.8

```
=ROUND(E2/SUM($E$2:$E$8)*100,1)
```

Say this: SUMIFS puts the sum range first. SUMIF puts it last.

EXCEL ROUND

Clean messy text

Names from forms are never clean

1 Remove extra spaces → ravi kumar

```
=TRIM(B2)
```

2 Fix the case too → Ravi Kumar

```
=PROPER(TRIM(B2))
```

3 First name only → Priya

```
=LEFT(B3,FIND(" ",B3)-1)
```

4 City with region label → Lucknow (North)

```
=D2&" ("&C2&")"
```

Interview trap: TRIM removes extra spaces between words too, not only at the ends.

EXCEL ROUND

Dates without panic

A date is a number underneath

1 **Month name** → Apr

```
=TEXT(F2,"mmm")
```

2 **Month key for a pivot** → 2024-04

```
=TEXT(F2,"yyyy-mm")
```

3 **Days between two orders** → 78

```
=F7-F2
```

4 **Working days, Mon to Fri** → 6

```
=NETWORKDAYS(F2,F3)
```

Remember: Subtracting two dates gives days. Format the cell as a number.

EXCEL ROUND

The tricky ones

Where most freshers get stuck

1 **Flag the duplicate order** → Duplicate

```
=IF(COUNTIF($A$2:A8,A8)>1,"Duplicate","")
```

2 **Rank order 102 by sales** → 5

```
=RANK(E3,$E$2:$E$8)
```

3 **Second highest sale** → 1,500

```
=LARGE(E2:E8,2)
```

4 **Count unique reps (B3:B8)** → 3

```
=SUMPRODUCT(1/COUNTIF(B3:B8,B3:B8))
```

5 **Label each order** → High

```
=IF(E2>=1000,"High",IF(E2>=700,"Mid","Low"))
```

Interview trap: LARGE counts ties. Two orders of 1,500 make the 2nd highest 1,500 too.

EXCEL ROUND

They also ask why

Question → Short answer

1. **VLOOKUP or INDEX + MATCH?**
   INDEX + MATCH. It looks left and does not break when a column is added.

2. **Why FALSE at the end of VLOOKUP?**
   Exact match. TRUE gives the nearest value and needs sorted data.

3. **What does $ do in $E$2?**
   Locks the cell, so it stays fixed when you copy the formula.

4. **COUNT vs COUNTA?**
   COUNT counts numbers. COUNTA counts every filled cell.

5. **SUMIF vs SUMIFS?**
   SUMIF takes one condition. SUMIFS takes many, sum range first.

6. **Pivot did not update?**
   Right click, Refresh. New rows need the source range or a Table.

7. **How do you remove duplicates?**
   Data tab, Remove Duplicates. Flag them first with COUNTIF to check.

8. **Why does a date show 45385?**
   Dates are numbers. Change the cell format to Date.

☆ THE 90-DAY SYSTEM · 5.0 BEST SELLER

Become a data analyst in 90 days.

Open it every morning. It tells you what to learn, build and ship that day. 1 hour a day, no coding background needed.

27 portfolio projects with real data

100+ interview Q&As with model answers

365 days of 1:1 mentor access

10+ job applications sent by Day 90

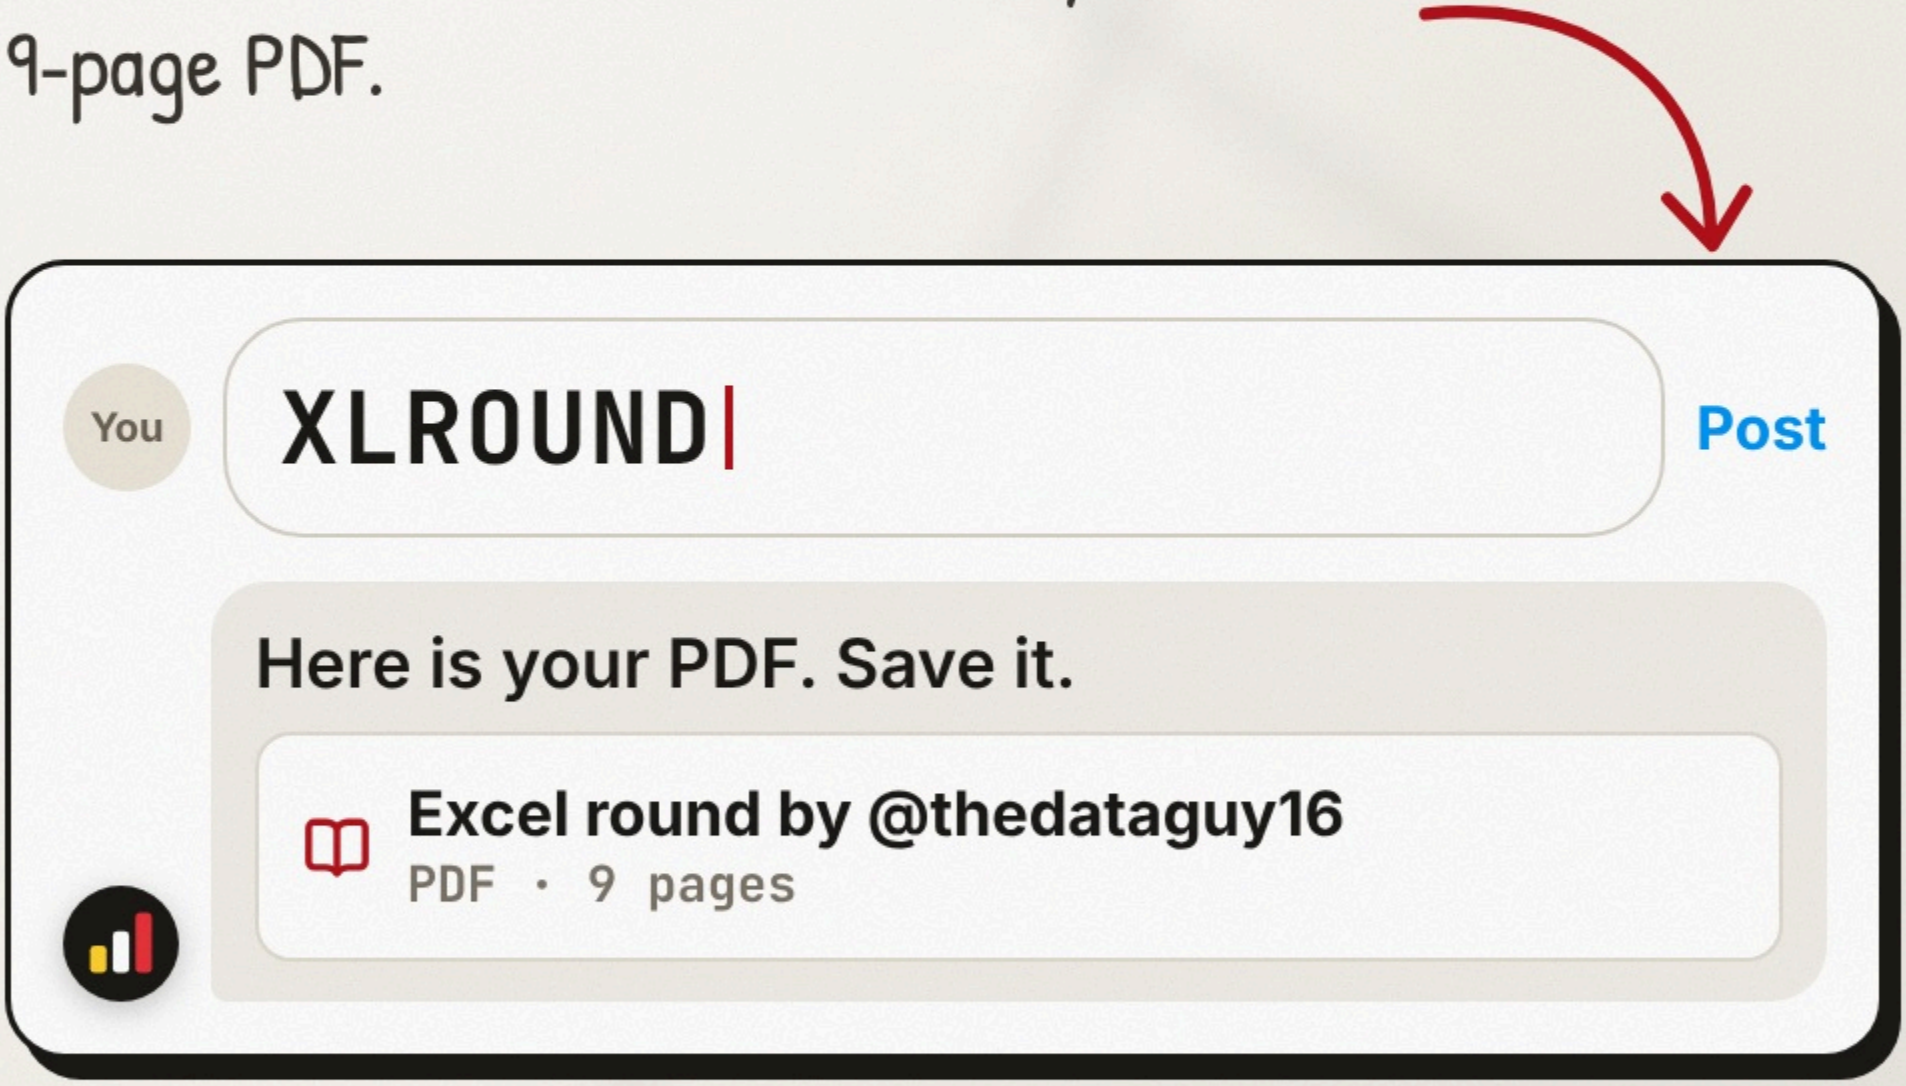

0 to job-ready, one day at a time

Built by Abhishek · 7 yrs in data · 31,000+ helped
