Your first 30 days as an analyst, planned

FIRST 30 DAYS

Week 1: learn the data

Do this → Done when

1. **Get access: email, Excel, SQL client, BI tool, shared drive**
   You can open every file your team talks about

2. **Ask for the last 3 reports your team sent**
   You know what the team ships every week

3. **Find where each report's numbers come from**
   You can name the source table or file for each

4. **Write a glossary: every short form you hear**
   MTD, GMV, TAT, churn all have a one-line meaning

5. **Sit with whoever makes the main report**
   You have watched it built once, start to end

6. **Note the 5 numbers your manager looks at first**
   You know what matters before you build anything

7. **Week-end note to your manager: what you learnt**
   Five lines, no slides, sent on Friday

FIRST 30 DAYS

Week 2: own one report

Do this → Done when

8 **Take over one small recurring report**
Your name is on it from this week

9 **Rebuild it once, slowly, by hand**
Your total matches last week's version

10 **Write the steps in a text file**
Someone else could run it from your notes

11 **Add 3 checks: row count, total, blanks**
You catch a broken file before your manager does

12 **Send it before the deadline, not on it**
It reaches them a few hours early

13 **Ask: what do you do with this report?**
You know the decision it feeds

14 **Fix one small thing people complain about**
One column, label or sort order is better

FIRST 30 DAYS

Week 3: speed it up

Do this → Done when

15 **Time each step of your report**
You know which step eats the most minutes

16 **Replace copy-paste with formulas or a pivot**
The slowest manual step is gone

17 **Turn the raw data into an Excel Table**
New rows flow into formulas and pivots

18 **Save your SQL queries in one file with comments**
You can rerun any pull in a minute

19 **Learn the 10 shortcuts you use most**
Mouse trips go down every day

20 **Ask a senior to review one of your queries**
You get one better way of writing it

21 **Document what changed and why**
The next person is not confused

FIRST 30 DAYS

Week 4: your first insight

Do this → Done when

22 **Pick one number that moved this month**
You know which number and by how much

23 **Break it down by region, product or channel**
You know where the change came from

24 **Check it is real: data error or real change?**
You have ruled out a broken file

25 **Write it in 3 lines: what, why, so what**
A busy manager gets it in 20 seconds

26 **Show it to your manager before anyone else**
No surprises in a team meeting

27 **Add it to your report as a small note**
Your report now says something, not only shows

28 **Ask for feedback on your first month**
You know one thing to keep and one to fix

FIRST 30 DAYS

Days 29 and 30: set up month two

Do this → Done when

29 **List what you own, what you shadow, what you skip**
Your work is clear to you and your manager

30 **Pick one skill your team uses that you lack**
Month two has one learning goal

31 **Keep a wins file: date, task, result**
Your appraisal writes itself later

☆ THE 90-DAY SYSTEM · 5.0 BEST SELLER

Become a data analyst in 90 days.

Open it every morning. It tells you what to learn, build and ship that day. 1 hour a day, no coding background needed.

27 portfolio projects with real data

100+ interview Q&As with model answers

365 days of 1:1 mentor access

10+ job applications sent by Day 90

0 to job-ready, one day at a time

Built by Abhishek · 7 yrs in data · 31,000+ helped
