How I'd explain pandas to a 5-year-old

pandas
explained to kids (1/2)

by @thedataguy16

DataFrame

Your class register: every row is a student, every column is name, roll number, marks.

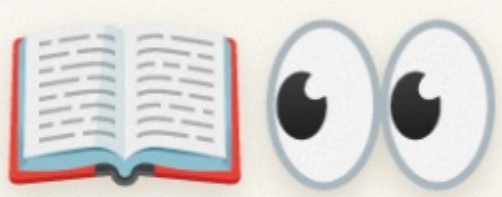

```
df =
pd.read_csv("sales.csv"
)
```

head()

Peeping at the first few pages of a new storybook before reading it all.

```
df.head()
```

Filter

Picking only the red sweets out of a big mixed box.

```
df[df["region"] ==
"North"]
```

Sort

Lining up for the class photo, shortest in front, tallest at the back.

```
df.sort_values("sales",
ascending=False)
```

Missing values

Empty boxes in the attendance register when nobody marked the day.

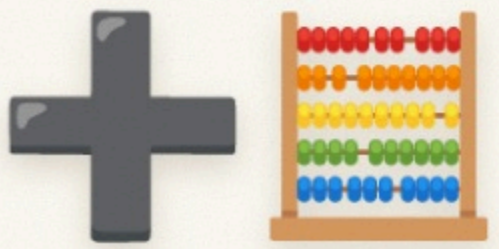

```
df.isna().sum()
```

New column

Adding a total marks column after all the subject marks.

```
df["total"] = df["qty"]
* df["price"]
```

pandas
explained to kids (2/2)

by @thedataguy16

groupby

Teacher adds up the marks of each house: Red, Blue, Green, Yellow.

```
df.groupby("region")
["sales"].sum()
```

merge

Matching each student's name with their bus number from another list.

```
df.merge(customers,
on="customer_id")
```

Duplicates

The same friend counted twice in the birthday party guest list.

```
df.drop_duplicates()
```

Clean text

Writing every name the same neat way: Amit, not amit or AMIT.

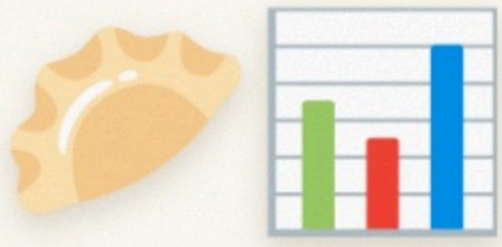

```
df["name"].str.strip().
str.title()
```

value_counts

Counting how many kids want samosa, how many want dosa.

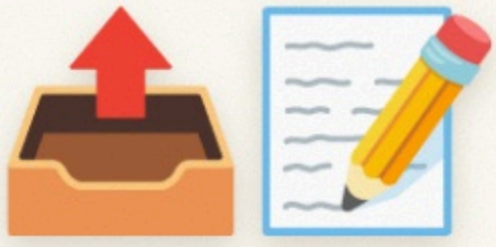

```
df["region"].value_coun
ts()
```

Export

Giving your neat homework copy to the teacher.

```
df.to_excel("report.xls
x", index=False)
```

☆ THE 90-DAY SYSTEM · 5.0 BEST SELLER

Become a data analyst in 90 days.

Open it every morning. It tells you what to learn, build and ship that day. 1 hour a day, no coding background needed.

27 portfolio projects with real data

100+ interview Q&As with model answers

365 days of 1:1 mentor access

10+ job applications sent by Day 90

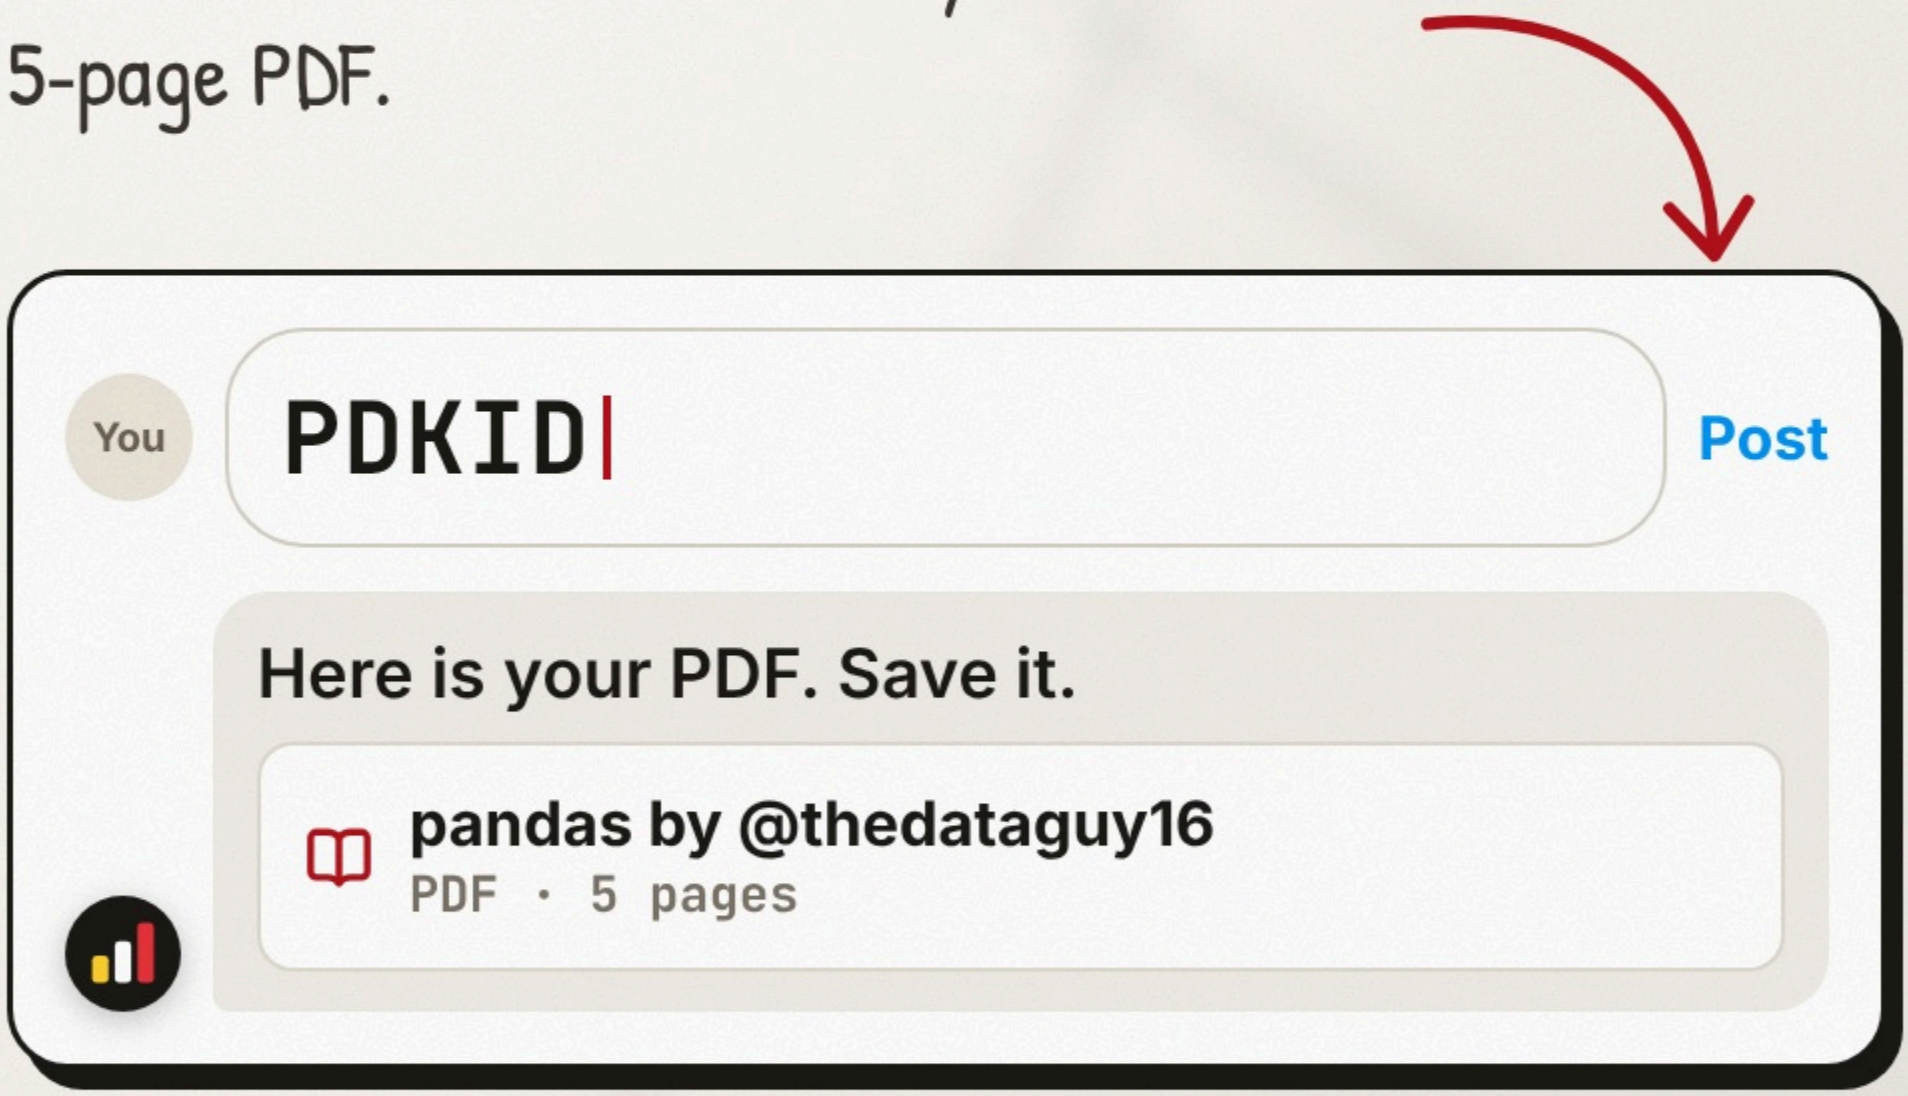

0 to job-ready, one day at a time

Built by Abhishek · 7 yrs in data · 31,000+ helped
